12 Brake booster - general information

1 It is not possible for the home mechanic to remove the brake booster. If the hydraulic unions are disconnected from the master cylinder, air will enter the high-pressure hydraulic system linking the master cylinder, hydraulic unit. Bleeding of the high-pressure system can only be safely carried out by a BMW dealer who has access to the service tester (see [Section 2](#)). The brake booster can be tested (see steps 3 through 5 in [Section 13](#)), but removal and installation should be entrusted to a BMW dealer or other qualified repair shop.
