11 Brake pedal - removal and installation

Manual transmission

- 1 Disconnect the clutch master cylinder pushrod from the clutch pedal, then remove the clutch master cylinder mounting bolts and push it to one side (see [Chapter 8](#)).
- 2 Remove the clutch pedal return spring and the pedal mounting clip, then slide the clutch pedal from the pivot.
- 3 Remove the brake light switch (see [Section 18](#)).
- 4 Slide off the retaining clip and remove the clevis pin securing the brake pedal to the servo unit pushrod.
- 5 Remove the mounting nuts and maneuver the brake pedal bracket assembly from under the instrument panel. Discard the self-locking nuts; new ones must be installed. If required, unhook the return spring and slide the pedal from the pivot.
- 6 Installation is the reverse of removal. Apply a smear of multipurpose grease to the pedal pivot and clevis pin.

Automatic transmission

- 7 Working under the instrument panel, release the mounting fasteners and remove the driver's side trim panel above the pedals (see illustration) . Disconnect any electrical connectors as the panel is withdrawn.

11.7 Remove the three bolts securing the panel above the pedals

8 Pry off the clip and remove the pin securing the brake booster pushrod to the brake pedal (see illustration) .
