20 Antenna (3-Series models) - general information

The radio antenna is built into the rear window. In order to improve reception an amplifier is installed to boost the signal to the radio/cassette unit. The amplifier unit is located behind the left hand rear pillar trim panel.

To gain access to the antenna amplifier unit, carefully unclip the left hand trim panel from the rear pillar, disconnecting the wiring from the interior light as the panel is removed. Disconnect the antenna lead and wiring then remove the retaining screws and remove the amplifier (see illustration) . Installation is the reverse of removal.

20.2 Radio antenna amplifier is mounted onto the left-hand rear pillar (3-Series models)
