

BMW 3-Series and Z4 (99-05) Includes 2006 325ci/330ci Coupe and Convertible models Haynes Online Manual.

4 Fluid seals - replacement

Torque converter seal

- 1 Remove the transmission and the torque converter as described in Section 5.
- 2 Using a hooked tool, pry the old <u>oil seal</u> from the bellhousing. Alternatively, drill a small hole, then screw a self-tapping screw into the seal and use pliers to pull out the seal.
- 3 Lubricate the lip of the new seal with clean fluid, then carefully drive it into place using a large socket or tube.
- 4 Remove the old <u>O-ring</u> seal from the <u>input shaft</u>, and slide a new one into place. Apply a small amount of petroleum jelly to the new <u>O-ring</u>.
- 5 Reinstall the torque converter and transmission as described in Section 5.

Output flange oil seal

6 Replacement of the <u>oil seal</u> involves partial dismantling of the transmission, which is a complex operation. <u>Oil seal</u> replacement should be entrusted to a BMW dealer or other qualified repair shop.
