## 1 General information

Included in this Part of <u>Chapter 2</u> are details of removing the engine/transmission from the car and general overhaul procedures for the <u>cylinder head</u>, <u>cylinder block</u>/ <u>crankcase</u> and all other engine internal components.

The information given ranges from advice concerning preparation for an overhaul and the purchase of replacement parts, to detailed step-by-step procedures covering removal, inspection, renovation and installation of engine internal components.

After <u>Section 5</u>, all instructions are based on the assumption that the engine has been removed from the car. For information concerning in-car engine repair, as well as the removal and installation of those external components necessary for full overhaul, refer to Part A or B of this Chapter, as applicable and to <u>Section 5</u>. Ignore any preliminary disassembly operations described in Parts A or B that are no longer relevant once the engine has been removed from the car.

Apart from <u>torque wrench</u> settings, which are given at the beginning of Parts A and B, all specifications relating to engine overhaul are at the beginning of this Part of <u>Chapter 2</u>.
